

Priyadarshini Rajmohan

Seattle, USA | +1 425 876 0150 | priyagautham28@gmail.com | [LinkedIn](#)

EDUCATION

University of Washington

Master of Science in Artificial Intelligence and Machine Learning (In progress)

Seattle, USA

Expected Graduation: 2027

Kongu Engineering College (Affiliated with Anna University)

Bachelor of Engineering in Computer Science (GPA: 8.42 - **Top 10 percentile**)

Erode, India

2014 – 2018

Thesis - Bloggle: Content Based Blog Recommendation System using TF-IDF and Popularity Based Ranking.

Relevant courses: Machine Learning, Graphics and Multimedia, Design and Analysis of Algorithms, Data Structures, Database Management Systems, Object Oriented Programming using C++.

EXPERIENCE

Boeing

Technology Lead

Seattle, USA

Jan 2023 – Jan 2025

- Designed and deployed a real time **Explainable ML based anomaly detection system** using a combination of **SVM's** and **boosted decision trees** to detect diagnostic events like fuel pump failures, hydraulic motor and aileron servo issues.
- Architected and implemented **distributed ML training workflows** using **XGBoost** and **Apache Spark** on large scale datasets of diagnostic events from Boeing's fleet.
- Worked on the development of the [Boeing Airplane Health Management](#) platform which collects and processes critical flight information from the power plant, fuel systems, sensors, and avionics.
- Optimized data processing workflows** by implementing various partitioning, sharding and parallel processing techniques that **reduced backend latency by 15%**.
- Built **low latency dashboards (<100ms)** using Angular and WebSockets that enabled worldwide maintenance and ground crews to react swiftly to anomalies.
- Ported **~300k lines of legacy code** from Java7 to Java 17, Apache Camel 2 to Camel 4, Redis 2.6 to Redis 4, Springboot 1.5 to Springboot 2.2 as part of a large software version migration project.
- Reduced health platform downtime and increased throughput by using various database caching and indexing strategies which **reduced application downtime by 30%**.

Ford Motors

Team Lead

Chennai, India

Jul 2021 – Dec 2022

- Led a team of 5 engineers** to build the [Ford Global Common Quality Indicator System](#) (GCQIS) tool for **concern tracking in 30+ languages** using ngx-translate library for dynamic translation loading and real time language switching.
- Contributed to the Global Vehicle Recall Management (GCAMP) at Ford by handling the **state management, API design and authentication processes**.
- Introduced a new interactive dashboard within GCAMP using Angular 15, Java 11 to create **dynamic UI grids, control release and role based access controls** for dealers.
- Built a real time query monitoring system, to optimize backend **query performance by 10%** using indexing, subquery, filtering and limiting within SQL databases.

Toyota Financial Services

Senior System Engineer/System Engineer

Chennai, India

Jul 2018 – Jun 2021

- Developed an API for automating creditworthiness checks using Toyota's business logic and financial data like credit scores, income, debt to income ratios etc.
- Automated ETL (Extract, Transform, Load) workflows** for data ingestion, credit scoring and underwriting using Apache Airflow and deployed on kubernetes clusters.
- Improved system robustness by implementing **Interquartile Range Filtering** and **Z score normalization** to reject outliers and automate data cleanup which **reduced human oversight by more than 20%**.

SKILLS

Languages: C++, Python, Java, JavaScript, Typescript, SQL

Frameworks: Pytorch, XGBoost, Apache Spark, Apache Camel, Angular, SpringBoot

DevOps: Docker, Jenkins, Kubernetes, Helm charts
